Work Experience

Full Stack Developer

Elevated Signals

Apr 2021 - Apr 2024

- Improved Postgres database stability and reduced load across all instances by 80% through performance monitoring, query plan analysis, query optimization and index modification.
- Increased overall system responsiveness up to 5x through Express API endpoint refactoring and streamlining of data needed by Angular and React frontends.
- Added new tests and maintained existing test suites in Jest to increase confidence in new releases.
- Collaborated with product team to design new features, improve existing workflows and address customer needs.
- Communicated with customer support team for triage and resolution of problems reported in production.
- Reviewed pull requests and offered constructive feedback for other members of development team.

Software Developer

TELUS

Sept 2019 - Apr 2021

- Used Express/Nodejs, React and Cassandra in development of a full stack internal web application to enable self-serve interaction between TELUS team members and a large-scale vendor API ecosystem using Kong.
- Developed, deployed and supported microservice APIs defined with OAS2 using Express/Nodejs, Jest, and the OpenShift container platform.
- Mentored junior developers in system design, code quality and critical thinking to improve team productivity.
- Published a privately scoped NPM package to facilitate standardization of request/response logging and correlation id implementations in other Express/Nodejs microservices.

Co-Op Experience

Software Developer

TELUS

Sep 2016 - Apr 2017

Software Developer in Test

Pulse Energy/EnerNOC

Sep 2014 - Apr 2015

Education

BSc. Computer Science

Simon Fraser University

2012 - 2018

Skills

Typescript | Javascript | ExpressJS | Angular | React | Postgres | SQL | AWS | Git |
Jest | HTML | CSS | OAuth2 | OpenAPI | API Design | i18n
