Work Experience

Full Stack Developer — Elevated Signals — Apr 2021 – Apr 2024

- Improved Postgres database stability and decreased load by up to 80% across all instances through performance monitoring, query plan optimization and index tuning.
- Reduced page load times through Express API endpoint refactoring and streamlining of data needed by Angular and React frontends.
- Designed and developed a full text search at the database level to give users the ability to quickly find any entity in the system using a single input field.
- Built an interactive directed graph visualization to help users trace the flow of materials within their production processes.
- Collaborated with product team to design new features and improve existing workflows in order to promote user retention and attract new monthly recurring revenue.
- Directly communicated with users and worked closely with support team to quickly triage and resolve production issues.
- Added and maintained Jest integration test suites in order to guard against regressions in new releases.

Software Developer — TELUS — Sept 2019 – Apr 2021

- Developed, deployed and supported OpenAPI defined microservice using Express/Nodejs, Jest, and the OpenShift container platform.
- Used Express/Nodejs and React to build an internal self-serve application that allowed other teams to rapidly onboard microservices to Kong API Gateway.
- Mentored junior developers in system design, code quality and critical thinking in order to improve team productivity.
- Published a privately scoped NPM package to facilitate standardization of request/response logging and correlation id implementations across company microservices.

Co-Op Experience

Software Developer	TELUS	Sep 2016 – Apr 2017
Software Developer in Test	Pulse Energy/EnerNOC	Sep 2014 – Apr 2015

Education

BSc. Computer Science	Simon Fraser University	2012 – 2018

Skills

Typescript | Javascript | ExpressJS | Angular | React | Postgres | SQL | AWS | Git |
Jest | HTML | CSS | OAuth2 | OpenAPI | API Design | i18n | ZPL
